PROPOSED FALSE CLAIMS ACT DISCLOSURE

Regarding UAP-Related Activities, Alleged Misclassification, Congressional Reporting, and Ongoing Observable Aerial Phenomena

DOCUMENT 1
TIMELINE OF OBSERVATIONS AND RELATED EVENTS

Prepared for Congressional Oversight and Public Release
Reporting Period: December 2024–Ongoing
PUBLIC VERSION

PUBLIC-VERSION NOTICE
Personally identifying and investigative information not necessary for public review has been omitted from this version. A separate investigative supplement may contain identifiers and other information necessary for authorized congressional or governmental investigators to test, corroborate, or independently reconstruct matters described in this report.

TIMELINE OF OBSERVATIONS AND RELATED EVENTS

December 2024–April 14, 2026

Reading key. Entries distinguish direct observations from supporting evidence, technical notes, and expressly identified inferences. An inference or working hypothesis is included as such and is not presented as a confirmed determination.

December 3, 2024

- An unidentified aerial object began appearing nightly in the southern sky.
- I conducted repeated observations, tests, triangulation, photography, and documentation.
- After several days, drones began appearing and hovering near the object.

February 2025

- During a day trip to Charleston, South Carolina, I observed that the object appeared to follow our travel.
- I also observed aircraft appearing to follow or accompany the object.

March 21, 2025

- The object was observed in the western sky for the final time before disappearing.

November 24, 2025

- The object reappeared in the eastern sky.
- Within days, drones again began appearing around it.
- Drones moved left to right, circled the object, and operated throughout the surrounding sky.
- On some nights, as many as ten drones were visible simultaneously.

Late November 2025 — Close Drone Encounter

- While standing at a window and directing a flashlight toward the object, I observed a drone turn toward my residence.
- The drone approached at an estimated altitude of approximately 40 feet.
- It descended into a grove of trees facing my home and extinguished its lights.

Late 2025 — Additional Drone Observations

I documented recurring drone behaviors, including:

- A large “mother drone,” approximately the size of a car, apparently releasing smaller drones displaying red lights.
- Drones flying in slow grid patterns over the neighborhood at an estimated altitude of approximately 80 feet.
- Formations in which two illuminated drones flew with an unlit drone positioned between them.
- Groups of drones flying toward the primary object and scattering immediately before reaching it.

January 1, 2026

- I began observing several drones producing contrail-like trails.

- Only a small number of drones displayed the trails.
- Within minutes, all but the brightest stars became obscured.

January 2, 2026 — Wolf Moon Supermoon

- I photographed heavy airborne particulate during the Wolf Moon Supermoon.
- The particulate became dense enough to completely obscure the Moon, including the lunar disk.
- Air Quality Index readings reached the Yellow, or Moderate, category.
- Multiple aircraft could be heard operating overhead.

Evidence: Photographs and contemporaneous air-quality documentation.

January 2–4, 2026

Members of my household experienced:

- Brain fog.
- Increased anxiety.
- Elevated heart rate.
- Dysregulation in my child.

I did not identify an obvious psychological cause for the symptoms.

Inference: *Based on the timing, I considered whether the symptoms might be associated with the activity occurring overhead. This was a concern, not a confirmed determination.*

Early January 2026

- The aerial fogging became increasingly frequent.
- According to my observations, it developed into a near-daily occurrence.
- The pattern continued until I began discussing or alluding to it publicly on TikTok.

January 6, 2026

- I began mentioning or indirectly alluding to the recurring fogging activity on TikTok.

January 8, 2026

- I publicly referenced the U.S. Department of Defense on TikTok.
- On the same date, I documented fogging dense enough to reduce the Sun to a small visible disk before completely obscuring it.

Evidence: Photographs documenting the progression.

January 14, 2026

- I began what I considered the initial, gradual public rollout of my whistleblower disclosures.

January 28, 2026

- I began publicly disclosing my observations more directly on TikTok.

January 31, 2026

- I prepared a TikTok video intended to show the observed craft.
- Before publication, I discovered that the draft had been deleted.
- I also observed that the draft appeared to have been hashed.

Technical note: A cryptographic hash is a mathematical fingerprint generated from digital data. Hashing is routinely used for indexing, integrity verification, deduplication,

and content identification. The presence of a hash does not, by itself, establish that a person or organization reviewed or removed a file.

Inference: *Because the draft appeared to have been processed before disappearing, I considered the event significant. This interpretation has not been independently verified.*

February 1, 2026

- A second full moon was completely obscured under conditions similar to those documented during the January Wolf Moon.
- I began observing what appeared to be a second type of airborne material.
- Unlike the earlier material, it left the sky appearing blue rather than visibly hazy.
- Despite the clearer appearance, AQI readings remained in the Yellow, or Moderate, category.
- As the object's appearance time shifted earlier each day, I began observing it during daylight hours.

Evidence: Photographic sequences and air-quality documentation.

February 2026 — Geomagnetic Storm

- During a reported G5 geomagnetic storm, I observed that the persistent fogging dissipated within approximately one hour.
- This differed from the atmospheric behavior I had previously observed.

Inference: *I considered the timing potentially significant but have not established a causal relationship.*

February 5, 2026

- I realized that the area where the repeated fogging activity was occurring was also home to nesting bald eagles.
- I documented the apparent geographic overlap because bald eagles are a protected species and the observation may be relevant to environmental review.

February 7, 2026

- During the Scarlet Dragon exercises, I observed an exceptionally fast aerial object with an orange-colored underside.
- The object crossed my field of view in well under one second.
- It was the fastest apparent aerial movement I had personally observed from that location.
- I regularly observe commercial aircraft, military aircraft, helicopters, and drones from my property. The object's apparent motion was substantially faster than anything I had previously witnessed.

Inference: *Based on my research, I understood that orange coloration may sometimes be associated with aircraft or systems undergoing testing. Because the observation occurred during the Scarlet Dragon exercises, I considered whether investigators might determine that the object was associated with those activities. This was not a confirmed conclusion.*

February 8, 2026

- I posted TikTok videos stating that I intended to travel.
- The decision was influenced by my February 2025 observation that the object appeared to follow my family during a trip to Charleston.

- After the announcement, an unfamiliar TikTok user commented, “Where are you going, beautiful?”
- I documented the interaction because members of my TikTok community generally did not ask personal questions of that nature.

Inference: *Based on the earlier travel observation, I considered whether a “tethering” or “hitchhiker” effect might be associated with the phenomenon. This was a working hypothesis.*

Note: I cannot determine whether the social-media interaction was significant or coincidental.

February 10, 2026

- At approximately 5:00 a.m., I observed Charter personnel working on a utility pole across from my residence.
- I was aware that Charter held contracts with the U.S. Department of Defense.

Note: I documented the timing and location but draw no conclusion from the observation alone.

February 13, 2026

- A low-flying helicopter equipped with unusual front-mounted equipment passed directly over my residence.
- The equipment appeared to resemble an electromagnetic boom or similar apparatus.

Evidence: Photographs or video, if applicable.

February 14, 2026

- I observed a black balloon carrying suspended equipment drifting across the sky.

Evidence: Photographs or video, if applicable.

February 21, 2026

- I publicly announced my intention to use what I referred to as the “hitchhiker effect” by traveling in an effort to trigger a UAP intercept.

Inference: *Based on my previous travel observations, I believed that an intercept could generate official records subject to congressional oversight or reporting requirements. This was a working hypothesis.*

February 24, 2026

- I observed aircraft releasing what appeared to be a dark or black material.
- Only some aircraft appeared to release it.
- I documented this activity on relatively few occasions compared with the more commonly observed fogging.

February 28, 2026

- I photographed the object positioned adjacent to the Moon.
- Based on the photographic sequence, the object appeared to be in front of the visible fog layer.

Evidence: Photographs documenting the object’s apparent position relative to the Moon and fog.

March 1, 2026

- I observed another low-altitude helicopter flying over my residence.
- This was separate from the February 13 overflight.

March 3, 2026

- I made a second public announcement on TikTok stating my intention to travel.
- An unidentified woman came to my residence and knocked on my door.
- She also knocked on a neighboring residence.
- Although there appeared to be room to turn around by pulling forward, the driver backed out of the area.
- I posted an official TikTok notice stating that I was conducting a whistleblower investigation.
- I publicly stated that I was investigating potential fraud, waste, and abuse under the False Claims Act in connection with the documented activities.

Inference: *I considered whether the vehicle's manner of departure may have been intended to prevent its license plate from being captured by security cameras. I cannot determine the actual reason.*

March 11, 2026

- My husband received an unsolicited call from a person claiming to be associated with UNC Health.
- The caller asked questions about me.
- The callback number was not listed as belonging to UNC Health.
- The caller did not request that I personally return the call.

Note: I documented the call because it appeared unusual. I cannot determine whether it was related to other events in this timeline.

March 13, 2026

- I posted a notice stating my belief that a persistent "tether" or "hitchhiker effect" existed between me and the observed object.
- I stated that the object might continue to follow me if I changed locations.

Inference: *This was a working hypothesis based on my prior observations, not a confirmed finding.*

March 14, 2026

- Multiple fighter aircraft flew directly over my property at what I perceived to be an unusually low altitude.

March 15, 2026

- I publicly announced my intention to leave my current location on March 20.
- I did not disclose my intended destination.

March 17, 2026

- I made another public announcement stating my intention to change locations.
- A Chinook helicopter flew over my area.
- A Robin Sage training exercise had been scheduled in the surrounding region.

March 19, 2026

- A Notice to Airmen was issued for the Blowing Rock, North Carolina, area.

- Robin Sage activity for the area had previously been announced.
- A person claiming to be associated with U.S. Special Forces commented on one of my TikTok posts.
- I received a notification of the comment, but it did not appear in the visible comment thread afterward.

Note: I documented the missing comment because I found it unusual. I cannot determine whether it was related to other events.

March 20, 2026

- I departed North Carolina for Arizona.
- Before departure, I observed widespread wilting and flattening of daffodils throughout Boone.
- Persistent fogging continued during the early portion of the trip until approximately Tennessee.
- Near Tennessee, I began observing aircraft releasing material ahead of our direction of travel.
- We checked into a Marriott hotel.
- I observed the craft moving over the hotel.
- Our hotel room was entered while we were away.
- Approximately $500 in cash and a tablet were missing.
- A woman identifying herself as being from the “Child Protective Network” attempted to gain entry to our hotel room because our son was crying.
- During a later traffic stop, a Tennessee State Trooper advised us that he had received a welfare call regarding our child.
- The trooper found no concerns involving our son.
- We informed him about the woman who had attempted to enter the hotel room.
- The trooper stated that no agency called the “Child Protective Network” existed and that he did not know the woman’s identity.

Inference: *I wondered whether the widespread condition of the daffodils could have been associated with the recurring fogging. I have not determined the cause.*

Note: I cannot determine whether the hotel entry, unidentified woman, welfare call, theft, or aerial observations were related.

March 21, 2026

- We relocated to a hotel in Jackson, Tennessee, for the night.

March 22, 2026

- We stayed overnight at a hotel in Arkansas.
- I continued observing aircraft activity over Arkansas.
- While traveling through Texas, I observed airborne particulate severe enough to substantially reduce long-distance visibility.
- Only the first row of wind turbines remained clearly visible.
- During a stop at a Hardee’s restaurant in Texas, I observed aircraft activity overhead and the craft positioned near the apparent center of the activity.
- We later spent the night in Nevada.
- During the evening, I observed a third UAP.
- Earlier that evening, I observed what appeared to be a fourth object moving independently.

Evidence: Photographs and videos documenting reduced visibility, visible trails, and the unidentified objects.

Inference: *I considered the timing and apparent relationship between the aircraft activity and the craft noteworthy.*

March 23, 2026

- At a Nevada rest area, the sky was clear and blue when we entered the facility.
- After approximately 20 minutes, we returned outside and observed substantially increased aircraft activity.
- The surrounding mountains appeared hazy or smoggy.
- I posted an arrival video documenting my observations.
- The video was removed from my TikTok account but remained available on another profile where it had also been posted.
- We arrived at Second Mesa, Arizona.
- I began publicly identifying myself as a False Claims Act whistleblower involved in an investigation.
- I observed reports indicating that Phoenix-area AQI had risen into an “international emissions” category, with the reported cause attributed to sources outside the local area.

Evidence: Photographs, social-media records, and contemporaneous air-quality reports.

Inference: *I considered the apparent increase in aircraft activity during the short rest-stop visit noteworthy.*

March 24, 2026

- I continued observing aircraft activity over the mesas.
- Local residents stated that similar activity had been occurring for approximately one week before my arrival.
- I had previously disclosed my destination publicly on TikTok.
- At a petroglyph site, I observed a drone following our movements.
- I also observed a craft traveling in the same general direction as our vehicle.
- Later that day, I recorded the craft moving over the mesas.

Evidence: Photographs, video, and contemporaneous notes concerning statements by local residents.

March 25, 2026

- We departed Second Mesa, Arizona.
- As we traveled away from the area, I observed what appeared to be a rapid increase in aircraft activity ahead of our direction of travel.

Inference: *I considered the timing noteworthy but have not determined whether the activity was related to other observations.*

March 26, 2026

- While traveling toward Fort Smith, Arkansas, I documented AQI readings increasing into the Yellow, or Moderate, category at approximately 56 to 59.
- Visibility decreased to approximately eight miles.
- PM2.5 levels approximately doubled after we crossed the Arkansas state line.

- While traveling through western Tennessee, I observed multiple UAPs changing positions relative to one another.
- A smaller UAP appeared to depart while a larger UAP moved into its apparent position.

Evidence: Public AQI and visibility data, contemporaneous records, and photographs.

Inference: *I documented the apparent change in positions because I considered it noteworthy. I have not determined its significance.*

March 27, 2026

- I documented that Tennessee had enacted legislation restricting certain aerosol releases.
- Memphis-area AQI readings ranged from approximately 54 to 62, reflecting elevated PM2.5 levels.
- Public reports described Nashville-area air quality as reaching unhealthy levels.
- Conditions were very windy.
- I observed six aircraft appearing to release visible trails.
- Satellite weather reports indicated clear skies, which did not appear consistent with the visual conditions I observed.
- While traveling on Interstate 40, I observed what appeared to be a relay of drones operating alongside our route for approximately 20 miles.
- Approximately every five minutes, one drone departed while another approached from across the roadway and assumed a similar position relative to our vehicle.
- During the same period, I observed multiple UAPs changing positions.
- A larger UAP appeared ahead of our vehicle and was intermittently visible before disappearing.

Evidence: AQI records, weather reports, satellite imagery, photographs, videos, and contemporaneous records.

Inference: *I documented the repeated drone-replacement pattern because I considered it noteworthy. I have not determined its purpose or relationship to other events.*

March 28, 2026

- We returned to Boone, North Carolina.
- I recorded video showing a clear blue sky while the AQI measured 62, within the Yellow or Moderate category.

Evidence: Video and AQI documentation.

March 30, 2026

- I publicly offered a $500 reward for information identifying the woman who had represented herself as being from the “Child Protective Network.”
- I publicly alleged that military exercises were being used to conceal UAP intercepts and avoid mandatory reporting to Congress.

Evidence: Video of the hotel encounter, public reward announcement, and dated public posts.

March 31, 2026

- I confirmed that approximately $500 in cash and a tablet had been stolen from the hotel room during the same stay in which the unidentified woman attempted to gain entry.

- Media reports indicated that the U.S. Space Force was seeking or evaluating bunker facilities.

Evidence: Theft documentation and contemporaneous media reports.

April 1, 2026

- I publicly reported my observations of a persistent unidentified aerial object and ongoing military aircraft activity in the vicinity of Boone.

Evidence: Dated public post or video.

April 2, 2026

- During a recorded conversation, the Marriott hotel manager confirmed that employees had spoken with the woman who identified herself as being from the “Child Protective Network.”
- This differed from statements made during the original encounter indicating that hotel personnel knew nothing about her.

Evidence: Recorded conversation.

April 3, 2026

- I published a comprehensive video documenting the UAP observations, related travel, and events that had occurred up to that point.
- Representative Anna Paulina Luna was tagged in the publication.
- I conducted an experiment to determine whether the observed drones responded to radio transmissions.
- Using a walkie-talkie configured to a ham-radio setting, I read my whistleblower report aloud.
- During the transmission, multiple drones overhead repeatedly stopped and turned toward my location.
- After this date, I no longer observed the same type of drone response documented during earlier observations.

Evidence: Dated public video and contemporaneous documentation of the radio experiment.

April 4, 2026

- I published two public announcements stating my intention to travel to Washington, D.C.

Evidence: Dated public posts or videos.

April 5, 2026

- I publicly announced that nine days remained before my planned Washington, D.C., departure.

Evidence: Dated public post or video.

April 6, 2026

- I publicly announced that eight days remained before my planned departure.
- I signed into my CapCut account and found that CapCut Pro access had been enabled despite my not purchasing a subscription or initiating a free trial.
- I found no published policy at the time indicating that Pro access could be granted accidentally.

- Several hours later, I received a renewal notification displaying a dash rather than a dollar amount.
- After I publicly discussed the incident and raised privacy concerns, I later observed that CapCut's published policy had been updated to acknowledge that some users might unexpectedly receive Pro access.

Evidence: Dated public announcement and screenshot of the CapCut notification.

April 7, 2026

- I publicly announced that seven days remained before my planned departure.

Evidence: Dated public post or video.

April 8, 2026

- Public reports indicated that the All-domain Anomaly Resolution Office had logged large clusters of unidentified aerial phenomena during the period corresponding to my travel through Arizona.

Evidence: Public reporting.

April 9, 2026

- I issued a five-day public notice before my planned departure to Washington, D.C.
- I publicly stated that anyone wishing to contact me regarding my observations could call or text my published telephone number.
- I received no contact.

Evidence: Dated public post or video.

April 11, 2026

- I issued a three-day public notice before the publicly announced departure date.
- I departed for Washington, D.C., earlier than announced.
- During approximately the first hour and a half of travel, I did not observe the aerial activity documented during earlier trips.
- A Kp 5–6.1 geomagnetic storm was reported during this period.
- Near Winston-Salem, I observed a Cessna aircraft overhead at approximately 5:10 p.m.
- At approximately 5:15 p.m., publicly available flight-tracking information appeared to show a departure time of approximately 5:20 p.m.
- I observed three separate vehicles traveling without visible rear lights or brake lights.
- The vehicles were different makes and models and appeared at different points during the trip.
- We stopped overnight in Richmond, Virginia.
- At the hotel, I observed multiple drones operating approximately three to four stories above ground level.

Evidence: Dated public notice, space-weather records, flight-tracking records, photographs, videos, and contemporaneous documentation.

April 12, 2026

- We traveled to the Washington, D.C., area and visited Gravelly Point near Ronald Reagan Washington National Airport.
- Our vehicle remained parked nearby while we walked in the park for approximately 45 minutes.
- Upon returning, I found the driver's-side window rolled down.

- The vehicle did not have remote or smart-window controls, and no other property appeared disturbed.
- We drove through downtown Washington toward the White House.
- Law-enforcement officers were conducting security screening associated with a World Bank event.
- We continued toward the Washington Monument rather than entering the secured area.
- Near the monument, I observed numerous drones operating over the water.
- After I focused my attention on them, several separated from the larger group and moved toward our vehicle.
- UAPs became visible despite the ambient light pollution.
- During this period, the UAPs were the only objects I observed in the night sky; I did not observe other stars.
- One drone maintained a position approximately two car lengths behind and offset to the side of our vehicle.
- When our vehicle stopped at traffic lights, the drone also remained stationary.
- At one intersection, it moved laterally an estimated 20 feet without an observable change in orientation, then resumed its prior position when traffic moved.
- At a steakhouse in Alexandria, Virginia, I observed multiple drones slightly above the parking-lot security lights.
- After leaving the restaurant, drones were again observed while we traveled to our hotel.
- After check-in, my husband reported that a drone was hovering over our vehicle.
- I went outside and observed a large drone between approximately the second- and third-story window height of the hotel.
- After I spoke toward it, the drone changed direction, ascended briefly, moved downward along the front of the hotel, and departed.
- Several minutes later, I observed multiple drones across the street.
- One moved toward me and passed directly overhead.
- During both close encounters, my camera stopped recording as the drone passed overhead.
- Photographs were nevertheless obtained of the drone near the hotel and the drone approaching my position.
- After the drones left the immediate hotel area, I again observed the UAPs toward the Potomac River and Ronald Reagan Washington National Airport.
- Commercial aircraft departing the airport banked with the UAPs visible in the same portion of the sky.

Evidence: Photographs, videos, interrupted recording files, and contemporaneous documentation.

April 13, 2026

- We departed Alexandria and began returning to North Carolina.
- I reviewed reports stating that unidentified drone activity had occurred near Fort McNair on April 11–12.
- I reviewed reporting describing a star-shaped object on weather radar on April 12.
- Reports also stated that the U.S. Army was conducting real-world drone-defense testing during that period.
- I observed commercial aircraft continuing to operate despite the aerial activity I had documented.
- I photographed an aerial object that I could not identify as either a drone or a UAP.

- Beginning near Winston-Salem and continuing through Wilkes County into the North Carolina mountains, I observed a drone maintaining a position near our vehicle for an extended portion of the drive.
- During the same trip, I observed the large UAP identified in my notes as “Commander M” positioned ahead of our vehicle.
- This appeared to be the same object previously documented during the Tennessee trip.

Evidence: News reports, photographs, videos, and contemporaneous documentation.

April 14, 2026

- At approximately 1:40 p.m., I observed a helicopter flying at what I estimated to be a very low altitude over my area.
- The Department of Defense reached the deadline for providing requested videos to Representative Anna Paulina Luna.

Evidence: Photographs or videos of the helicopter and public records concerning the congressional request.
